EDUCATION

CUNY College of Staten Island

Bachelor of Science in Computer Science

May 2029

New York, NY

Relevant Coursework: Data Structures, Algorithms, Operating System, Database, Object Oriented Programming

EXPERIENCE

Software Engineer Intern

CUNY High Performance Computing Center

August 2025 – November 2025

New York, NY

- Built a Python web crawler data pipeline to unify research paper data from **10000+** publications.
- Designed and implemented PostgreSQL schema to optimize queries for all publications from multiple sources.

Software Engineer Intern

Evergreen Investments

March 2025 – May 2025

New York, NY

- Engineered a full-stack real estate app in React/Vite, Express/Node, and PostgreSQL for **1000+** users.
- Developed Zoho check-in and check out with Deluge reducing manual time-tracking by **30%** for teams.

PROJECTS

Flint - GPU Deep Learning Engine | C++, CUDA, Python, PyTorch, pybind11

[GitHub](#)

- Built a deep learning engine from scratch in C++ and CUDA with hand-written convolution and matrix multiply kernels.
- Implemented backpropagation to train a Siamese CNN on the engine and evaluated FP16 inference against PyTorch.
- Shipped the engine as a Python package with pybind11, powering real-time face authentication in a local AI assistant.

Fuse - 1st Place, Columbia University DivHacks | Python, FastAPI, XRP Ledger, xrpl-py, Gemini API

[Devpost](#)

- Built an AI agent that autonomously pays invoices on the XRP Ledger, capping worst-case loss at a small float with ledger-enforced multisig and delegation, proven across 14 live devnet scenarios.
- Designed the architecture and built the policy, signer, and reader services in FastAPI with a local XRPL stand-in that verifies real signatures, writing 82 of 104 tests.

EcoScan - 1st Place, HackNYU | React Native, Expo, Python, FastAPI, Gemini 2.5, OCR, Lykdat

[Devpost](#)

- Built the React Native app that scans a clothing tag and garment with the phone camera, uploads both to a FastAPI pipeline, and renders eco-scores, alternatives, and scan history.
- Added scan-based search with a reusable price-range filter across 20 alternatives per scan, and a script that reuses the eco-score heuristics to generate the app's recommendation data.

Leadership Experience

Vice President

Computer Science Club

January 2026 – Present

New York, NY

- Taught programming workshops, ran coding competitions, and mentored students to build their technical skills.
- Drove a **75%** membership increase and **25+** average attendance by leading company partnerships and event.

Founder & Lead Organizer

Dolphin Hacks (Google X MLH)

January 2026 – Present

New York, NY

- Founded and independently organized Dolphin Hacks, a **12-hour** hackathon at the College of Staten Island, acquiring sponsorships, website development, Devpost and MLH launch, judging design, and event execution.
- Secured **\$1,000+** in sponsorships from Google, MLH, and the CSI CS Department through targeted outreach.

SKILLS

Languages: Python, TypeScript, JavaScript, C++

Frameworks & Tools: PyTorch, CUDA, FastAPI, Linux, Node.js, Express.js, React, Next.js, Kubernetes

Databases: PostgreSQL, MySQL, SQLite
